📇 Projects

TaskMaster
Using React, Tailwind, Syncfusion, and Context API, I created an admin dashboard application. This project allowed me to showcase my ability to create a functional and user-friendly application using modern web technologies.

The admin dashboard application is a simulation of a real admin panel and includes features such as an overview of employees, a calendar for reminders, and a kanban board.

This project required strong problem-solving skills and an understanding of responsive design principles to ensure that the application is optimized for various screen sizes. My role in this project involved creating and implementing the frontend design, as well as collaborating with the backend team to ensure proper integration of the application.

MovieMatch
Developed a user-friendly web application using HTML, CSS, and JavaScript to allow users to easily search and find their desired movies. The application features a search engine for movies and actors and provides details about upcoming and popular movies. Implemented features to view trailers of each movie and access information about the actors and crew. Through this project, gained experience in developing responsive and dynamic web applications, as well as utilizing third-party APIs for data integration.

SocialSphere
SocialSphere is a social media web application that I developed using HTML, CSS, and JavaScript. The app allows users to register for an account, log in, and interact with other users by creating posts and leaving comments on existing posts. I utilized Mockapi as a database to store all user and post data.

I implemented object-oriented programming principles in the development of the project and utilized Git for version control throughout the development process. The project provided me with valuable experience in front-end web development and working with RESTful APIs.

⚙ Skills

</> Profession-related
- Advanced programming skills and experience in JavaScript;
- Advanced coding skills and experience in HTML, CSS, SASS, Tailwind;
- Good programming skills and experience in React.js, Redux;
- Good experience and skills with APIs;
- Good experience and skills with Git, GitHub;
- Good experience and skills with Jest and React Testing Library;
- Good experience and skills with ChatGPT;
- Good Raster and Vector graphics skills (Adobe Photoshop, Figma);

🔤 Languages
- Serbian (native)
- English

👤 Personality
- I thrive in collaborative environments and believe that the best results are achieved through teamwork.
- I am driven by a passion for creating impactful and innovative solutions.
- I have a natural curiosity and love to learn new things.
- I take ownership of my work and am committed to delivering high-quality results.
- I have a knack for identifying challenges and coming up with effective solutions.
